SMITHSONIAN HERPETOLOGICAL INFORMATION SERVICE

The first number of the SMITHSONIAN HERPETOLOGICAL INFORMATION SERVICE series appeared in 1965. SHIS number 1 was a list of herpetological publications arising from within or through the Smithsonian Institution and its collections entity, the United States National Museum (USNM). The latter exists now as little more than the occasional title for the registration activities of the National Museum of Natural History. No. 1 was prepared and printed by J. A. Peters, then Curator-in-Charge of the Division of Amphibians & Reptiles. The availability of a NASA translation service and assorted indices encouraged him to continue the series and distribute these items on an irregular schedule.

The series continues under that tradition. Specifically, the SHIS series prints and distributes translations, bibliographies, indices, and similar items judged useful to individuals interested in the biology of amphibians and reptiles, and unlikely to be published in the normal technical journals. We wish to encourage individuals to share their bibliographies, translations, etc. with other herpetologists through the SHIS series. If you have such an item, please contact George Zug for its consideration for distribution through the SHIS series. Contributors receive a pdf file for personal distribution

This special publication issue is available only as a CD [\$5.00 each] from the authors at the Division of Amphibians and Reptiles, National Museum of Natural History, Smithsonian Institution, PO Box 37012, Washington, D.C. 20013-7012, U.S.A. Recent issues of SHIS are available as pdf files from our webpage [www. mnh.si.edu/rc/](http://www.mnh.si.edu/rc/). At the time of publication, it is not certain whether the webpage will be able to host this particular SHIS publication owing to its size.

INTRODUCTION

The bibliography (Volume 1) is organized alphabetically by last name of the first author. The Species Index, Keyword Index, and Geographic Index are organized by the unique number that EndNote® assigns to each record. To find a reference from the three indices, one must utilize the References by EndNote® Number, listed in numerical order. There is sufficient information associated with the EndNote® numerical order entry to find the specific reference involved in Volume 1 – References.

Complete authors names are used in the EndNote® Number index for the EndNote® records that contain such information. Note that there are some “missing” record numbers – these represent duplicate records, one of which was deleted from the EndNote® file.

Currently recognized species in the Species Index are indicated by bold font. Other species names are synonyms or *nomina nuda*.

The Keyword Index lists terms from the Keyword section of each citation in Volume I.

The Geographic Index lists countries and/or geographic regions that are taken from the Keyword sections in Volume I.
